DIGITAL HOUSE - WEB FULL STACK DEV
Period: 02/2020 - 01/2021
Integrative project within the framework of Digital House

- Development of a social network using HTML for structure, CSS for design and Javascript for interactions and / or client side validations.
- The design and development of FrontEnd takes good practices to make sites responsive.
- The Backend and the REST API was developed in PHP, with Laravel as a support framework using good MVC practices.
- We design and use UML for the assembly and organization of the relational database with which we then interact through MySQL.
- The entire project was developed following the guidelines of Agile Methodologies (Scrum), and was managed using Git for version control, in a private repository of collaborative and organized work.

Personal Profile

I enthusiastically take on new challenges and my perseverance to meet goals and objectives has taken me far. I have a great sense of responsibility, but my main motivation is that I love what I do.
